Show me shome code !

Try to keep a font size as big as possible. Remember also that too much code on one slide is useless. The audience reads this texte and does not listen to your presentation anymore. Try to split on different slides your presentation.

If you show some code : BIG FONT please

Ask the audience and confirm that they can read from far far away...

245 speakers with a badge, 68 exhibitors

and more than 3000 attendees

Less code is less bug

Why less slides is better than more slides

- Devoxx France runs on 3 days
- Audience loves live coding and demo
- Too much bullet points is super boring
- More text : less concentration from the audience
that will just read your slides
- So this is exactly what you should not do

Pourquoi peu de diapositives c'est mieux

- Devoxx France se déroule sur 3 jours
- Le public préfère les démonstrations et l'écriture de code en direct
- Trop de points avec des puces c'est ennuyant
- Plus il y a de texte à lire sur vos diapos, moins l'audience vous écoute
- Si vos slides peuvent vous remplacer, alors vous ne servez à rien comme orateur
- Imaginez que votre ensemble de diapos ne doivent pas pouvoir vivre sans vous, sans votre présentation et votre contenu
- Merci donc de ne PAS faire comme ce slide à mourir

I want cool images

- You can generate Dualtone photos quickly on <https://duotone.shapefactory.co/?i=ELy8RcnCgEo&f=313741&t=6bb884&q=wave> with the colors of Devoxx FR 2019 (see [https://color.adobe.com/fr/Mon-thème-Color-color-theme-12221805/](https://color.adobe.com/fr/Mon-th%C3%A8me-Color-color-theme-12221805/))

HMGET key field [field ...]

Available since 2.0.0.

Time complexity: O(N) where N is the number of fields being requested.

Returns the values associated with the specified `fields` in the hash stored at `key`.

For every `field` that does not exist in the hash, a `nil` value is returned. Because non-existing keys are treated as empty hashes, running `HMGET` against a non-existing key will return a list of `nil` values.

Return value

`Array reply`: list of values associated with the given fields, in the same order as they are requested.

```
redis> HSET myhash field1 "Hello"
(integer) 1
redis> HSET myhash field2 "World"
(integer) 1
redis> HMGET myhash field1 field2 nofield
1) "Hello"
2) "World"
3) (nil)
redis>
```
